Summary

Game Designer with 5+ years of professional experience with hands-on experience designing and implementing gameplay system, progression, and world content.

Skills

Game Design

- Game system design, implementation, and balancing
- Quest scripting, branching logic, and state-tracking
- Dynamic dialogue configuration and maintenance
- Concise design documentation
- Cross-discipline collaboration and playtesting

Game Engine

- Unity, Unreal Engine

Programming

- C#, C++, Unreal Blueprints

Software

- Notion, Miro, Figma, JIRA, YouTrack, Visual Studio, Rider, GIMP

Experience

Game Designer 12/2021 – Present

Stairway Games Coral Island *Anywhere, ID (Remote)*

- Balanced catch-rates and seasonal distribution for 150+ species across multiple biomes for fishing, insect-catching, and critter-catching minigame.
  - Leveraged real-world ecological data to design high-fidelity micro-habitats, ensuring species distributionaligned with authentic environmental conditions.
- Oversaw the integration and maintenance of 170+ dynamic dialogues using proprietary in-house tools.
  - Managed the full lifecycle of data assets, including complex logic configuration and technical debugging toresolve trigger conflicts and narrative desyncs.
- Architected and implemented 110+ narrative quest lines, including Main, Side, and Invisible state-tracking quests, utilizing complex branching logic to synchronize with player progression and dynamic world-states.
  - Navigated technical bottlenecks by identifying systemic trigger conflicts and designing high-level logic usingin-house tool or workarounds if proprietary tools reached their functional limits.
- Spearheaded a comprehensive audit of legacy single-player quest systems to architect a dual-stream progressionlogic for multiplayer integration.
- Engineered quest-generation logic for the errand system, establishing strict validation rules to maintain narrativeand mechanical consistency across in-game seasons.
- Worked cross-functionally with other designer, programmer, 3d artist, and QA to optimize design workflows.

Game Designer - Self-employed 02/2021 – 12/2021

Gnom Studios *Bekasi, ID*

- Developed core game features based on a children's book adaptation, including storylines, gameplay mechanics, and level design for a new video game title.
- Collaborated closely with programmers and 2D artists to deconstruct and achieve project goals.
- Conducted research on comparable games and real-world objects.
- Cultivated professional relationships with the marketing department.
- Documented design specifications to maintain project momentum and facilitate future problem resolution.

Game Designer 09/2020 – 02/2021

Anoman Studio *Tangerang, ID*

- Implemented core game features based on existing specifications, including gameplay mechanics and level design for various projects.
- Managed project requirements and achieved objectives through self-monitoring of progress, while providing comprehensive game design documentation for each assigned project.
- Collaborated with art and programming teams to design innovative game elements and optimize overall quality.
- Prioritized tasks and managed time effectively to consistently meet delivery deadlines.
- Conducted market research on similar titles based on specific project requirements.

Game Designer - Internship 07/2019 – 09/2019

Anantarupa Studios *Jakarta, ID*

- Conducted research on similar titles based on the assigned task.
- Developed the level design map.
- Established game mechanics, including player and enemy movement patterns.
- Designed wireframes for the gaming platform.

Education

Kalbis University Jakarta

Bachelor of Computer Science - GPA: 3.52 2016 - 2020
